

PROJECT PRE-QUALIFICATION QUESTIONNAIRE

TO TEST THE ELIGIBILITY FOR CARBON CREDITING BASED ON THE BASIC PRINCIPLES

Please answer the following questions by providing a brief description:

1. How will your project reduce greenhouse gas (GHG) emissions or remove GHG from the atmosphere?
*Please describe the activities (technology, business-as-usual scenario in the absence of the project).
Please also check the [CDM methodology booklet](#) and identify the mitigation activity that best describes your project.*
2. When and where do you plan to implement the project?
Please provide a timeline and the location.
3. Can you confirm that there are no local legal requirements that enforce the implementation of this type of activity now and in the near future (e.g., regulation of mandatory forest protection, methane capture regulations etc.)?
4. What is keeping you from implementing the project and how will the revenue from carbon credits help you overcome the barriers (e.g., financial barriers, institutional barriers, access to technology, information or infrastructure, scaling up an activity that is not common practice, etc.)
5. Can you confirm that the GHG mitigation from the project activity will not be claimed by any party other than the future buyers of the carbon credits?
